 - [True Top-Down 2D](#)

1. What did I do this week?

- **Project Conception:** Decided the core mechanics (2D Top-Down stealth and pursuit) and theme (1960s Jazz Noir)
- I did research to find out which engine was the best for my case. I compared the learning curve, and I kept in mind the time limit I have to make the game.

Week 2

I am still researching Q-learning, and I am publishing the Analysis to get feedback.

Week 3

Tuesday 15 of September

Today I am watching and starting to learn Godot to apply all this in my game. The tutorial I am gonna use is this [How to make a Video Game - Godot Beginner Tutorial](#)

I am learning that everything in Godot is made by Nodes, so Nodes are the fundamental building blocks of your game, they come in many types, some display an image, others sound or add physics. In Godot you use Scenes this allow us to bundle together nodes into reusable packages and this can be a character, weapon, menu, etc.

By following this tutorial I am gonna learn the basics, and even that I am using sprites that they are not Top-Down I am learning how to use every section of Godot, the animations, and the interface and how I should organize every folder.

I am learning how to create the map using Tiles for a 2D game,

Friday 18 of September

Fix some part of the script of the character to give it the animations for every action that he is supposed to do.

Week 4

Monday 21 of September

I changed my player script. Before, I had a long list of if and elif for every direction. Now I use one match, like Faruk told me. I also started the Project Plan with the Gantt chart.

Tuesday 22 of September

I rewrote the Analysis for the client after Frank's feedback. I decided to only design The Hunter and not build him, because there is not enough time.

Wednesday 23 of September

I wrote the Advice and the Design documents.

Thursday 24 of September

I made the player smaller (64 units) and changed all the sizes in the Design. I put the camera inside the player so it follows him.

Friday 25 of September

I made a new level map, like a maze, with the exit at the back door. I made the wireframes for the screens and finished my portfolio.
